

~ Information & Pricing ~

The Video Voice Speech Training System gives Speech-Language Pathologists in educational or clinical settings a motivating and effective tool to enhance and accelerate therapy results. Colorful games and graphic displays assist in speech development and remediation of a wide variety of speech disorders, with ages ranging from preschool to geriatric. Users enjoy **free software updates** via download from www.videovoice.com and exceptional service and support by phone or email, from real people with real answers. Versions are also available for home and international use (non-English keyboards supported).

System Features ~ All games and displays are adjustable, letting the therapist control content and easily tailor the feedback to individual therapy needs. The only external hardware required is a microphone (Logitech USB Desktop model recommended). The full Professional program includes:

- ◆ Formant Displays (Matrix & Temporal) for **vowel and articulation training**
- ◆ P-A-R Displays for work on **non-segmental control and connected speech**
- ◆ Assessment Displays for **Hz and dB and F0 measurement**
- ◆ Extensive **Fun & Games** activities, most with **multiple speech goal** options
- ◆ Reports & Analysis Functions - single **session & cross-time reports, exportable data**
- ◆ Data Management Functions - **tools for handling your caseload information**
- ◆ **Embedded Demonstrations and Samples** for illustrating operation of displays and games
- ◆ **Help Me Choose** - built-in training that makes getting started fast and easy
- ◆ Built-in Documentation (**context-sensitive Help, Solutions, Usage Tips**)
- ◆ Demonstration Program - **simulated operation explains program functions**
- ◆ **30-Day Free Trial** (no credit card or ongoing financial obligation)

Delivery via download only, worldwide. (See *System Descriptions* for version capabilities and differences.) Version 3.0 is licensed on a per-computer basis. Order and payment via PayPal; visit www.videovoice.com for further details.

Version 3.0 System Descriptions

Not sure which Video Voice software option is right for you? Here are basic descriptions of the capabilities and differences between the software operating modes.

Professional Use (\$495):

Installation on a single computer with **access to all Video Voice games and displays** in the Authorized User, International/Simplified, and Fun & Games 12-Pack operating modes.

Authorized User (Professional) is ideal for settings where multiple therapists share a computer. The Professional Use version lets many Speech-Language Pathologists therapists use the software without intermingling their caseload data. Each therapist's caseload folder can handle numerous individuals with storage of up to 255 model, score, and session data. Includes recordkeeping and reporting functions, and data management facilities. Authorized User mode supports **English-language keyboards only**.

International/Simplified (\$295):

Installation on a single computer with access to all Video Voice games and displays. Supports both Windows **Latin keyboards (e.g., English, French) and non-Latin keyboards (e.g., Arabic, Hindi)**. Some localization of buttons, on-screen text and rewards in French, Spanish, Italian, Portuguese, and German.

Installed software can be shared by multiple therapists, but lacks recordkeeping and reporting capabilities (no models, scores or other caseload data stored). Ideal for settings where data storage and reporting capabilities are unnecessary, and for locations that wish to use languages other than English.

Home Use (\$195):

Installation on a single computer, with access to all Video Voice games and displays. Designed for use by a single therapist/parent with a single child/individual. Allows storage of up to 255 model, score, and session data, and access to reporting functions. Models created by therapists with the full Professional version can be exported/imported for at-home practice. Supports **English language keyboards only**. Ideal for practice outside a traditional therapy setting.

Fun & Games 12-Pack (\$95):

Installation on a single computer, with access to 12 colorful voice activities from the Fun & Games Menu. Simplified operation with no model/score data storage, reporting, or data management capabilities. Supports **English and other language keyboards**. A cost-effective choice for those with limited budgets or who want visual biofeedback for speech practice only.
