

*~ Information & Pricing ~*

The Video Voice Speech Training System’s innovative, interactive, visual feedback on speech production gives Speech-Language Pathologists in educational or clinical settings a motivating and effective tool to enhance and accelerate therapy results. Its many colorful games and graphic displays assist in speech development and remediation of a wide variety of speech disorders, with ages ranging from preschool to geriatric. Versions of this versatile therapy aid have been in use for over 20 years. Users enjoy exceptional service and support by phone or email, from real people with real answers.

**System Features** ~ All Version 3.0 games and displays are adjustable, letting the therapist control content and easily tailor the feedback to individual therapy needs. The only external hardware required is a microphone (USB recommended, included with purchase). The program includes:

- ◆ Formant Displays (Matrix & Temporal) for **vowel and articulation training**
- ◆ P-A-R Displays for work on **non-segmental control and connected speech**
- ◆ Assessment Displays for **Hz and dB measurement**
- ◆ Extensive **Fun & Games** activities, most with **multiple speech goal** options
- ◆ Reports & Analysis Functions - single **session & cross-time reports, exportable data**
- ◆ Data Management Functions - **tools for handling your caseload information**
- ◆ **Embedded Demonstrations and Samples** illustrate operation of displays and games
- ◆ **Help Me Choose** - built-in training that makes getting started fast and easy
- ◆ Built-in Documentation (**context-sensitive Help, Solutions, Usage Tips**)
- ◆ Demonstration Program - **simulated operation explains program functions**
- ◆ **30-Day Free Trial**
